

## Steps to disable real time protection on your devices

- If you have an external antivirus (other than Windows Defender) try disabling the real time protection on your own.
- The procedure to disable the real time protection for Windows Defender is shown below.

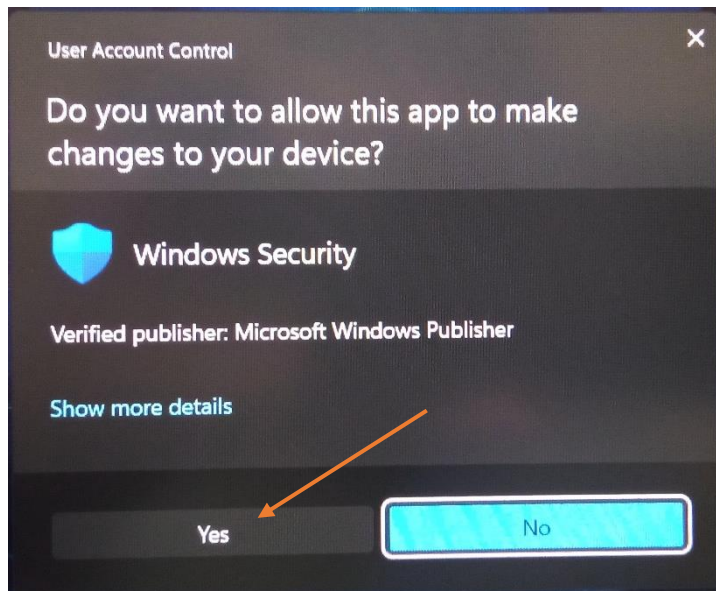

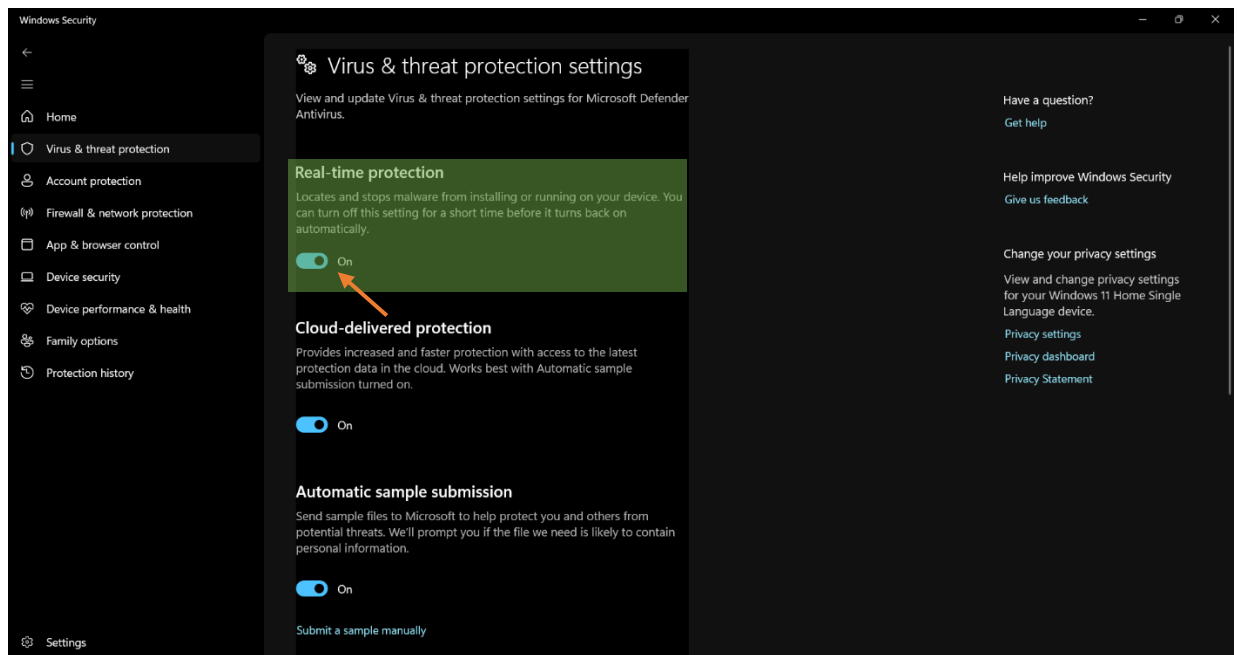

1. Open windows defender/security and go to **Virus and threat protection**.

2. Go to **Manage settings** in **Virus and threat protection** settings.

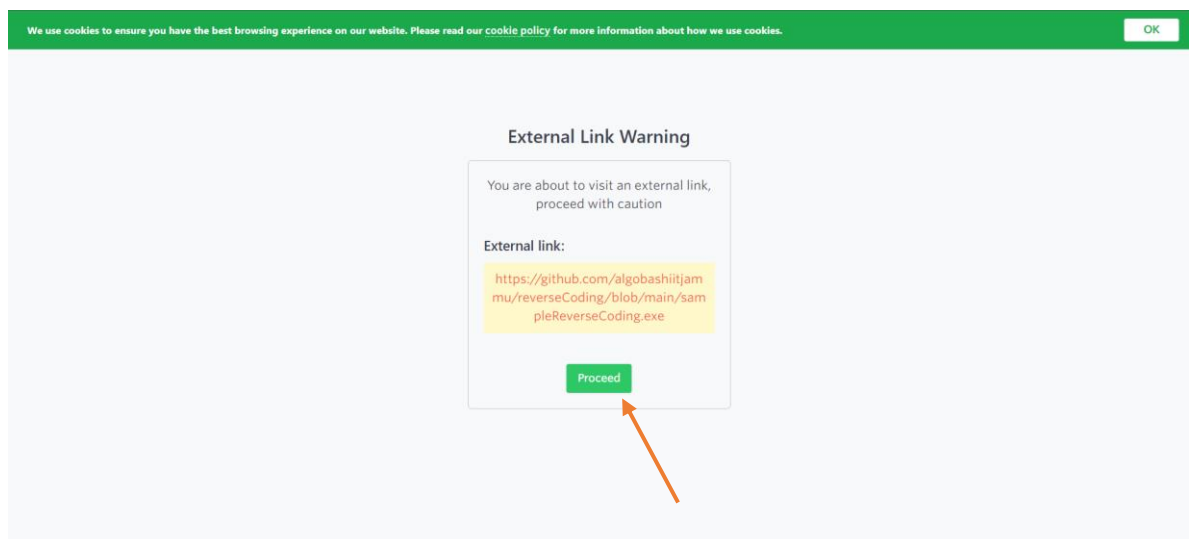

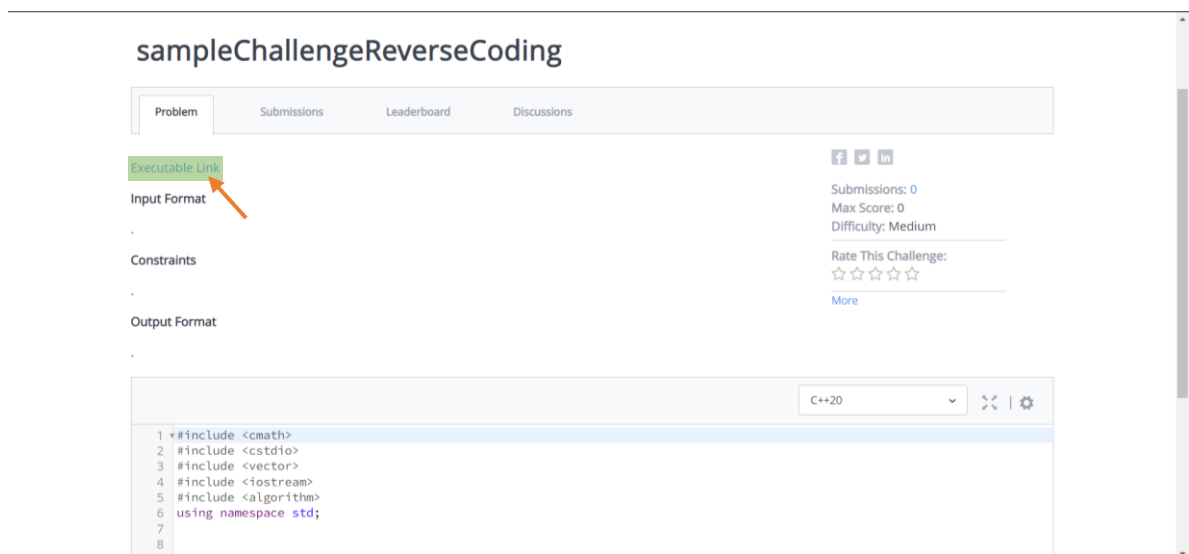

3. Turn off the Real time protection if it is turned on and click yes on the warning (if showed).

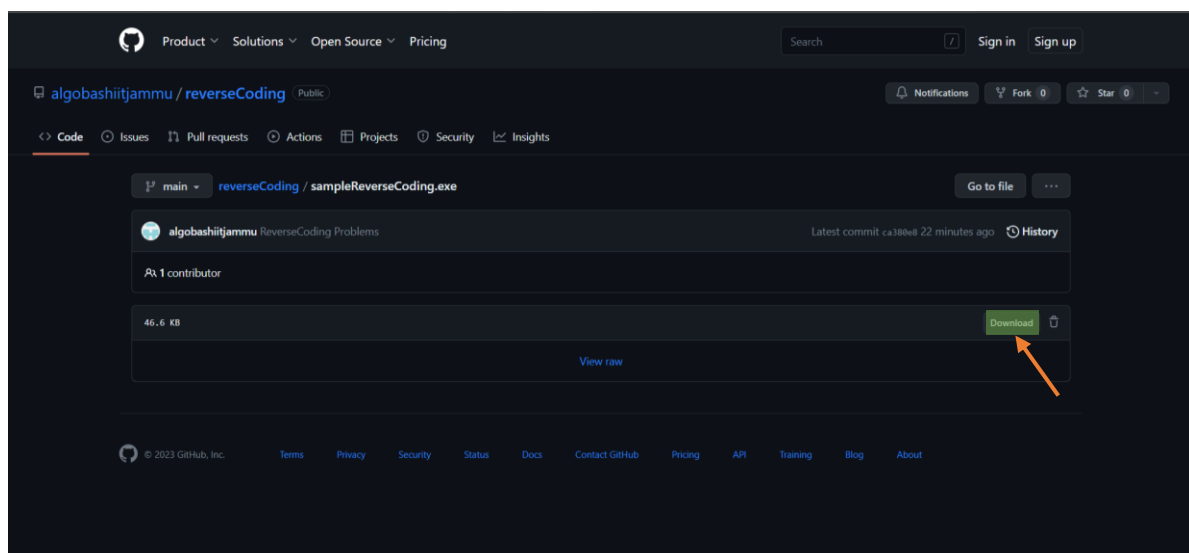

### Steps for downloading the executable file

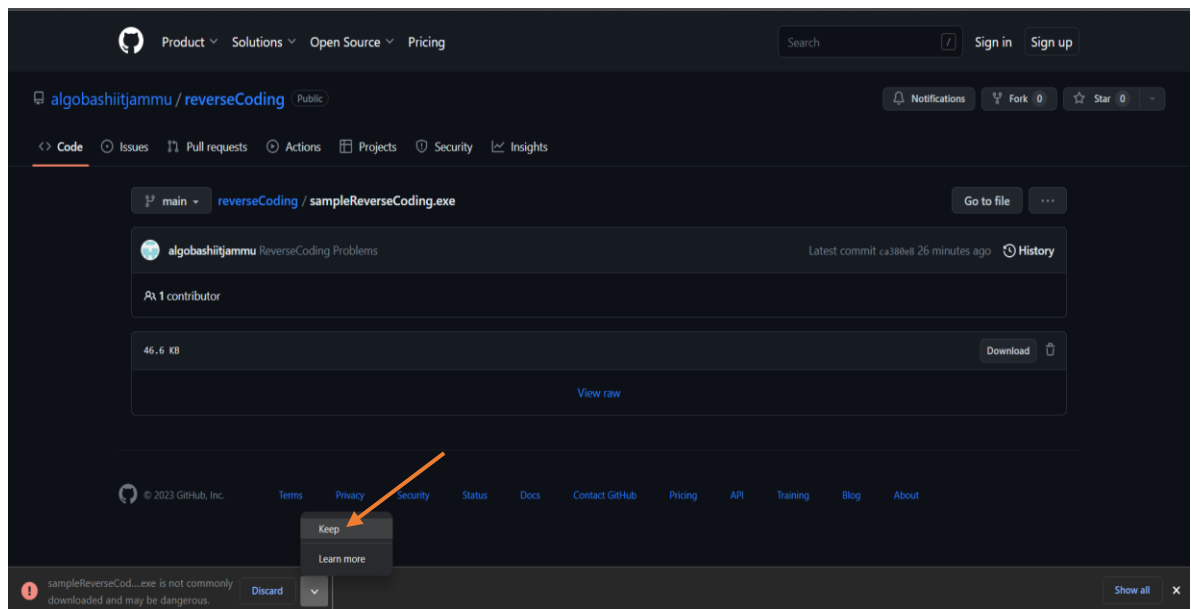

- An example of downloading the executable file of a sample question is shown below.
1. Click on the executable link and click proceed.

2. This will lead to the opening of a github file where you need to click the download button.

3. Clicking download will report a warning, click keep after opening the pop up menu.

4. Try opening the file from the downloads folder in your windows explorer.
5. Opening the file will report another warning (showing “Windows protected your PC”), you need to click **More info** and click **Run anyway**. You are good to go.
